Noisy Shader – Documentation

This shader is a versatile noisy cell shader built for the Universal Render Pipeline (URP). It combines stylized cell shading with layered noise, screen-space textures, and optional effects such as shadows, fresnel, and drip simulation.

General

- IndexRotationSpeed (float): Controls the rate at which all noise patterns evolve over time. This affects the main texture, shadows, and drip effects simultaneously.

Texture

- Texture Array (2D Texture Array): Defines the texture set used by the shader. Displayed using screen-space UVs.
- TexturesSize (float): Controls the zoom level of the textures.
- TexturesOpacity (float): Blends the texture over the base color.

Diffuse

- DiffuseColor: The main color of the material.
- DiffuseOffset (float): Controls the threshold where the cell shading transition occurs.
- DiffuseNoise (float): Adds noise to the separation between light and shadow regions.
- DiffuseNoiseScale (float): Controls the scale of the diffuse noise.

Shadows

Shadows are computed only from the main directional light. The light must use hard shadows.

- UseShadows (bool): Enables shadow reception on the object.
- ShadowColor (Color): Defines the color of the shadows.
- ShadowNoise (float): Adds noise to the shadow edge.
- ShadowNoiseScale (float): Controls the scale of the shadow noise.

Fresnel Effect

Adds a contour highlight effect, especially visible on rounded objects. Less effective on cubic geometry.

- UseFresnel (bool): Enables the fresnel effect.
- FresnelColor (Color): Color of the fresnel highlight.
- FresnelPower (float): Controls the intensity and falloff of the fresnel effect.

Drip

Creates a dripping effect around intersecting objects. The receiving object must intersect with the dripping object.

- UseDrip (bool): Enables the drip effect.
- DripColor (Color): Color of the drip.
- DripContrast (float): Controls the shape definition of the drip.
- DripStrength (float): Controls how much the drip spreads.
- DripNoiseScale (Vector2): Controls the scale of two combined noise patterns.
